# DATA ANALYTICS FOR SUPPLY CHAIN

Supply chains are complex systems involving multiple businesses and organizations with different goals and objectives. Supply chain analytics is an emerging and exciting area in high demand. Several analytical methods and techniques are used by practitioners to design and manage their supply chains effectively. A 2-day training is designed to help organizations to make smarter, and more informed decisions.

# 14 - 15 OCT 2020

Virtual Training 18,500/- + GST  
Classroom Training 22,500/- + GST
